

Strategy plan for K.G.Jebesen TREC 2019-2024

Vision

To diminish the suffering and burden of venous thrombosis by discovering novel risk factors and disease mechanisms to facilitate personalized prevention and treatment.

Common goals

- To further develop a robust and dynamic research milieu of ambitious, talented individuals
- To perform excellent research through teamwork with recognition of individual skills
- To develop methodological approaches in translational research (laboratory-, patient-, and population-oriented research) beyond the state of the art
- To promote international mobility and education to facilitate researcher independence
- To improve research visibility and public knowledge of venous thrombosis

Culture

- We promote mutual respect, safety, openness and team identity
- We recognize internal motivation as a key driving force for success
- We support autonomy, individual skills, talents and the need for meaningful work
- We value and respect constructive criticism and evaluation as tools for improvement

Organization

K.G.Jebesen TREC is organized as a translational research center which fosters the multidirectional integration of laboratory-, patient-oriented-, and population-based research, with the long-term aim of minimizing the burden of venous thrombosis
