

Cold rooms & freezer rooms

Cold rooms (+4C) and freezer rooms (-20C) are located on floor 2 of Naturfagbygget. These rooms are intended to be used for storing samples during the time you are actively working with the samples. For long-term storage of samples, we have other facilities outside of Naturfagbygget.

Samples to be stored in these rooms must have a clean outer packaging, suitable for the sample type. In addition, they must be marked with the sample name and the name of the contact person or owner of the samples, as well as chemicals in the samples.

In addition, a sample label (available in the cold room and freezer room) must be filled out and attached to the shelf next to the sample. The rooms are locked - Contact the lab staff to gain access.

On the first floor there is a freezer for storing samples at -80C.
Contact the lab staff to gain access.
