

Microscope lab 1

The room has up to 9 workstations with mainly petrographic microscopes with and without camera, and scanners.

- **Leica DM 4500P**

Petrographic microscope with option for reflected and transmitted light.

- **Leica binocular microscope**

The Leica petrographic microscope and the Leica binocular microscope are both connected to a setup with a scanner, camera, PC and a larger monitor on the wall, and are mainly used to take pictures of thin sections and foraminifera, respectively.

- **Plustek OpticFilm 8200i**

Scanner with the possibility of taking polarized images of thin sections.
